

LIFEGAMES

- WHITEPAPER -

ABOUT THE PROJECT

Life Games is a Web3 platform that contains different competitive skill-based mini-games where players can bet the \$LFGM token against their opponent.

What Life Games offers

- 📈 A sustainable business model aligned with the interests of investors
- 🎮 Variety of games finished or in an advanced production phase
- 🔧 A utility token combined with a deflationary economy
- 👤 A public and professional team
- 🤝 Development partners working for multinational companies and government agencies

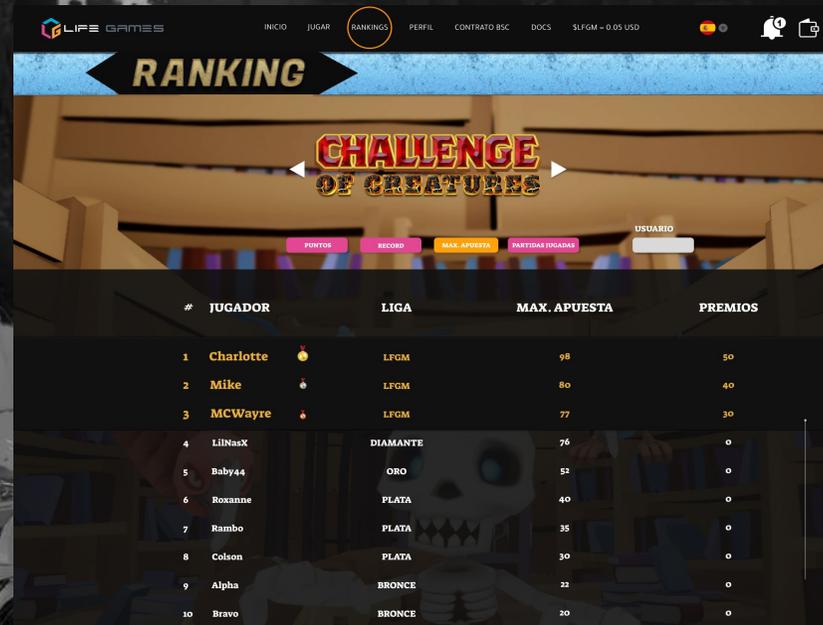

INVASIÓN Z

Se ha desatado el apocalipsis zombie y te encuentras solo en tu antiguo barrio. Sobrevive a las oleadas y utiliza las diferentes armas para matar a la mayor cantidad de zombies posibles y conseguir la mejor puntuación.

\$LFGM TOKEN USE

The \$LFGM token lays the foundation for the entire economy of Life Games, being the only token of the project. \$LFGM is not just a speculative token, but serves multiple functions both within and outside the platform.

BETS

The \$LFGM token is the only currency that players can use to bet on games within the platform.

PRIZES

There are prize pools in the form of \$LFGM tokens for the top players in leagues, tournaments, records, etc.

HOLD Y STAKING

Token \$LFGM holders will automatically receive a percentage of the buy/sell transactions of the token in their wallets, without having to perform any type of locking.

PURCHASE OF ASSETS

\$LFGM token can also be used for purchasing NFTs, visual distinctions, platform upgrades, etc.

PLATFORM GAME PROCESS

- ① Players will need to connect their wallet to be identified on the platform.
- ② Once connected, they will choose the game they want to compete in and the bet in \$LFGM tokens they want to make.
- ③ With our ranking and matchmaking system, we ensure that the match is between players of similar skill levels.
- ④ The winner of the match will receive the opponent's tokens, minus a commission dedicated to filling the prize pool and burning tokens, thus reducing the total supply.

RANKINGS & MATCHMAKING

We are in an environment where you are not only competing to determine who is the best player, but you are also putting monetary value at stake. That is why it is crucial to have the assurance that you are playing on equal terms against your opponent.

At Life Games, we have developed a ranking and matchmaking system that ensures levelled matches between players. Additionally, our algorithmic system ensures that it is not profitable for players to create secondary accounts, commonly known as "Smurfs," in an attempt to hide their true skill level.

The rankings distribute players according to their skill level into 6 different sections:

- LFGM
- Diamond
- Gold
- Silver
- Bronze
- Unranked

DISTRIBUTION OF PRIZES

At Life Games, we reward **skill** and not the amount of time a player spends playing; that's why we **distribute prizes** to the best players.

The prizes we give out are obtained through a portion of the fees charged per game, which makes the **system non-inflationary** (unlike most Play-To-Earn games).

To receive prizes, players must meet certain **requirements**, such as being in the highest league, having played a minimum number of games, and betting a minimum amount of \$LFGM.

These prize distributions are made periodically, ending the season and resetting the rankings.

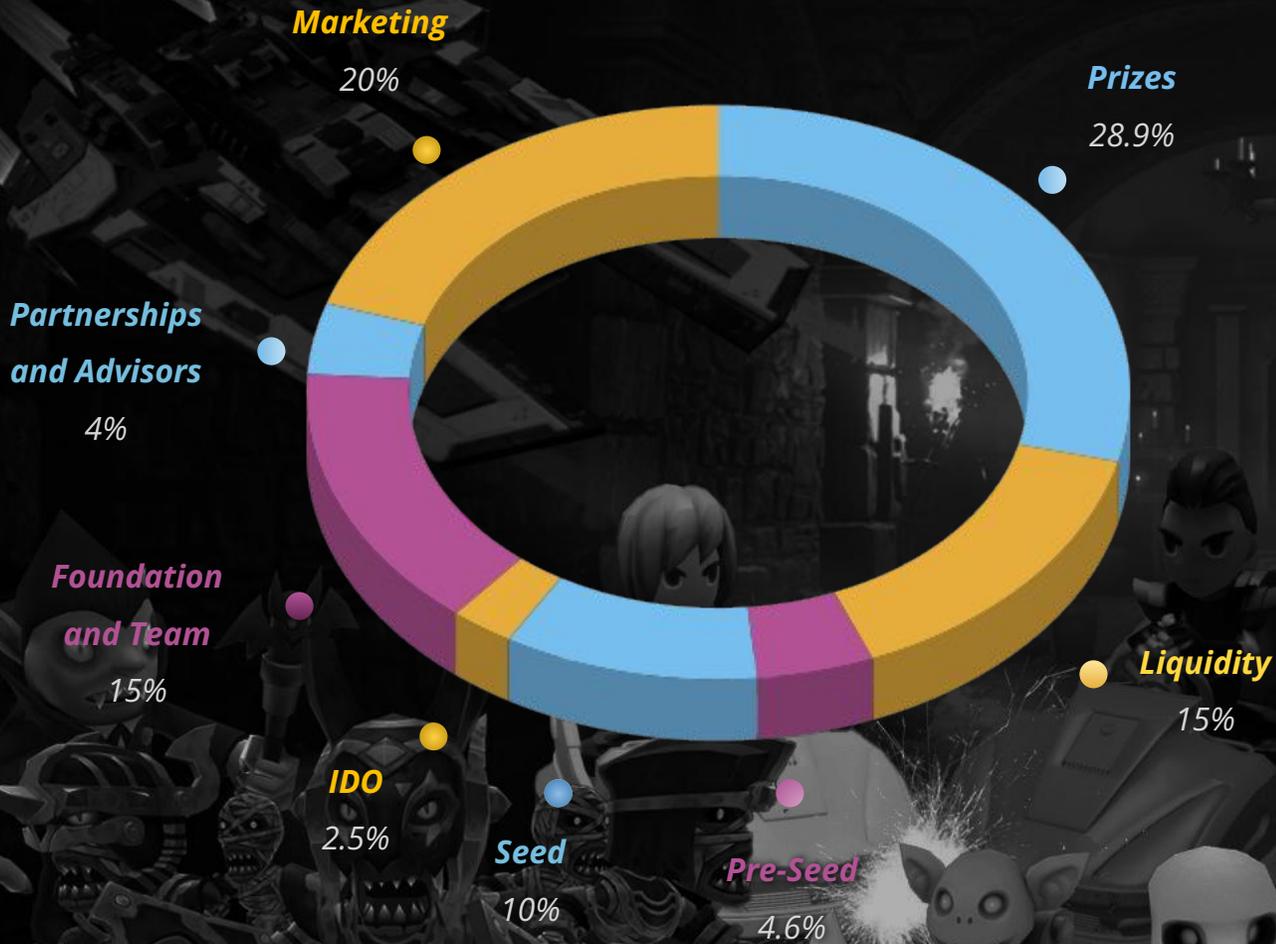

Prizes for positioning and records, for example, serve as an incentive for players to keep playing and strive to reach the top, which generates more **token burns** (deflation).

PROFILE

The profile is the space that each user has to choose their name and avatar, as well as to see all their game statistics: *Best scores, requirements to advance to the next league, earned and lost \$LFGM tokens, match history, expected rewards, achievements, missions, etc.*

TOKEN ECONOMY

DIAGRAM OF PLAYER INCREASE

1. ATTRACTIVE TOKENOMICS

Our constant token burning deflationary system and non-inflationary automatic staking are perfect for medium to long-term investors.

2. DOUBLE YOUR MONEY

Our betting system that allows you to double your money in each game you play and our addictive games will turn many investors into players. The more players there are, the more deflationary the token will be.

3. CONTENT DEMAND

Players will want to learn the best strategies to improve and win the most games, so they will look for content related to our games.

4. CONTENT OFFER

Influencers, upon seeing the demand for Life Games' games, will start to offer content about them.

5. FREE ADVERTISING

The Life Games videos created by the influencers will reach all of their followers and not just those who knew about the project, generating free advertising and attracting new investors and players.

Holders

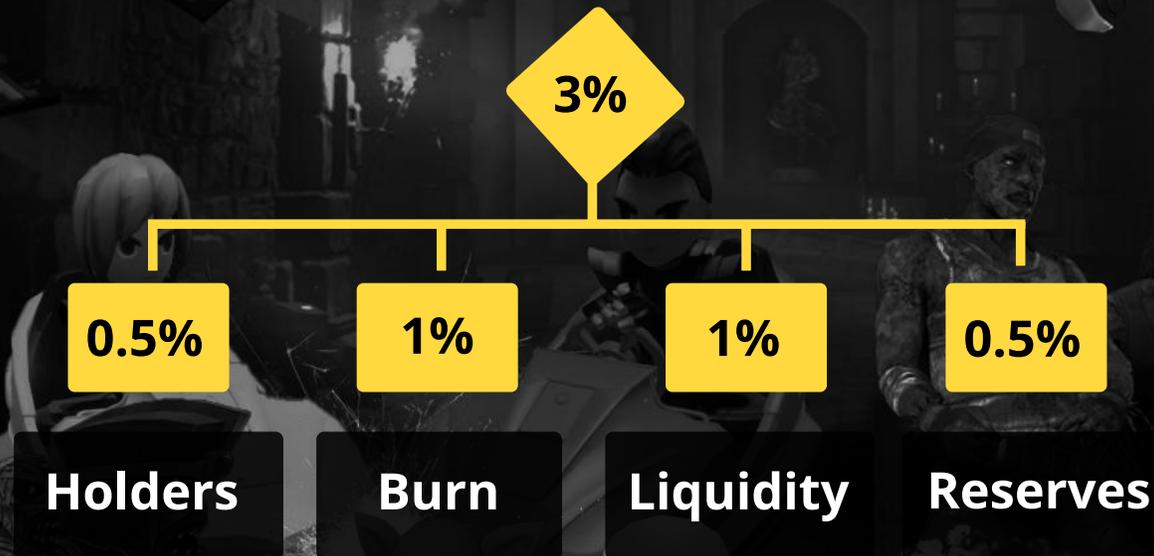

0.5% for Smart Staking. By simply holding the tokens in your wallet, you will receive 0.5% of the total market volume proportionally to the number of tokens you hold.

Burn

1% for token buyback and burn. We permanently destroy tokens, creating a deflationary token and making its value increase.

MARKET FEE

Exchange rate of \$LFGM token buy-sell transactions.

Liquidity

1% for liquidity. By increasing liquidity, we reduce price impacts and create price floors that make it more difficult to lower the token value.

Reserves

0.5% for reserves. These funds will be used for all company expenses: servers, salaries, etc.

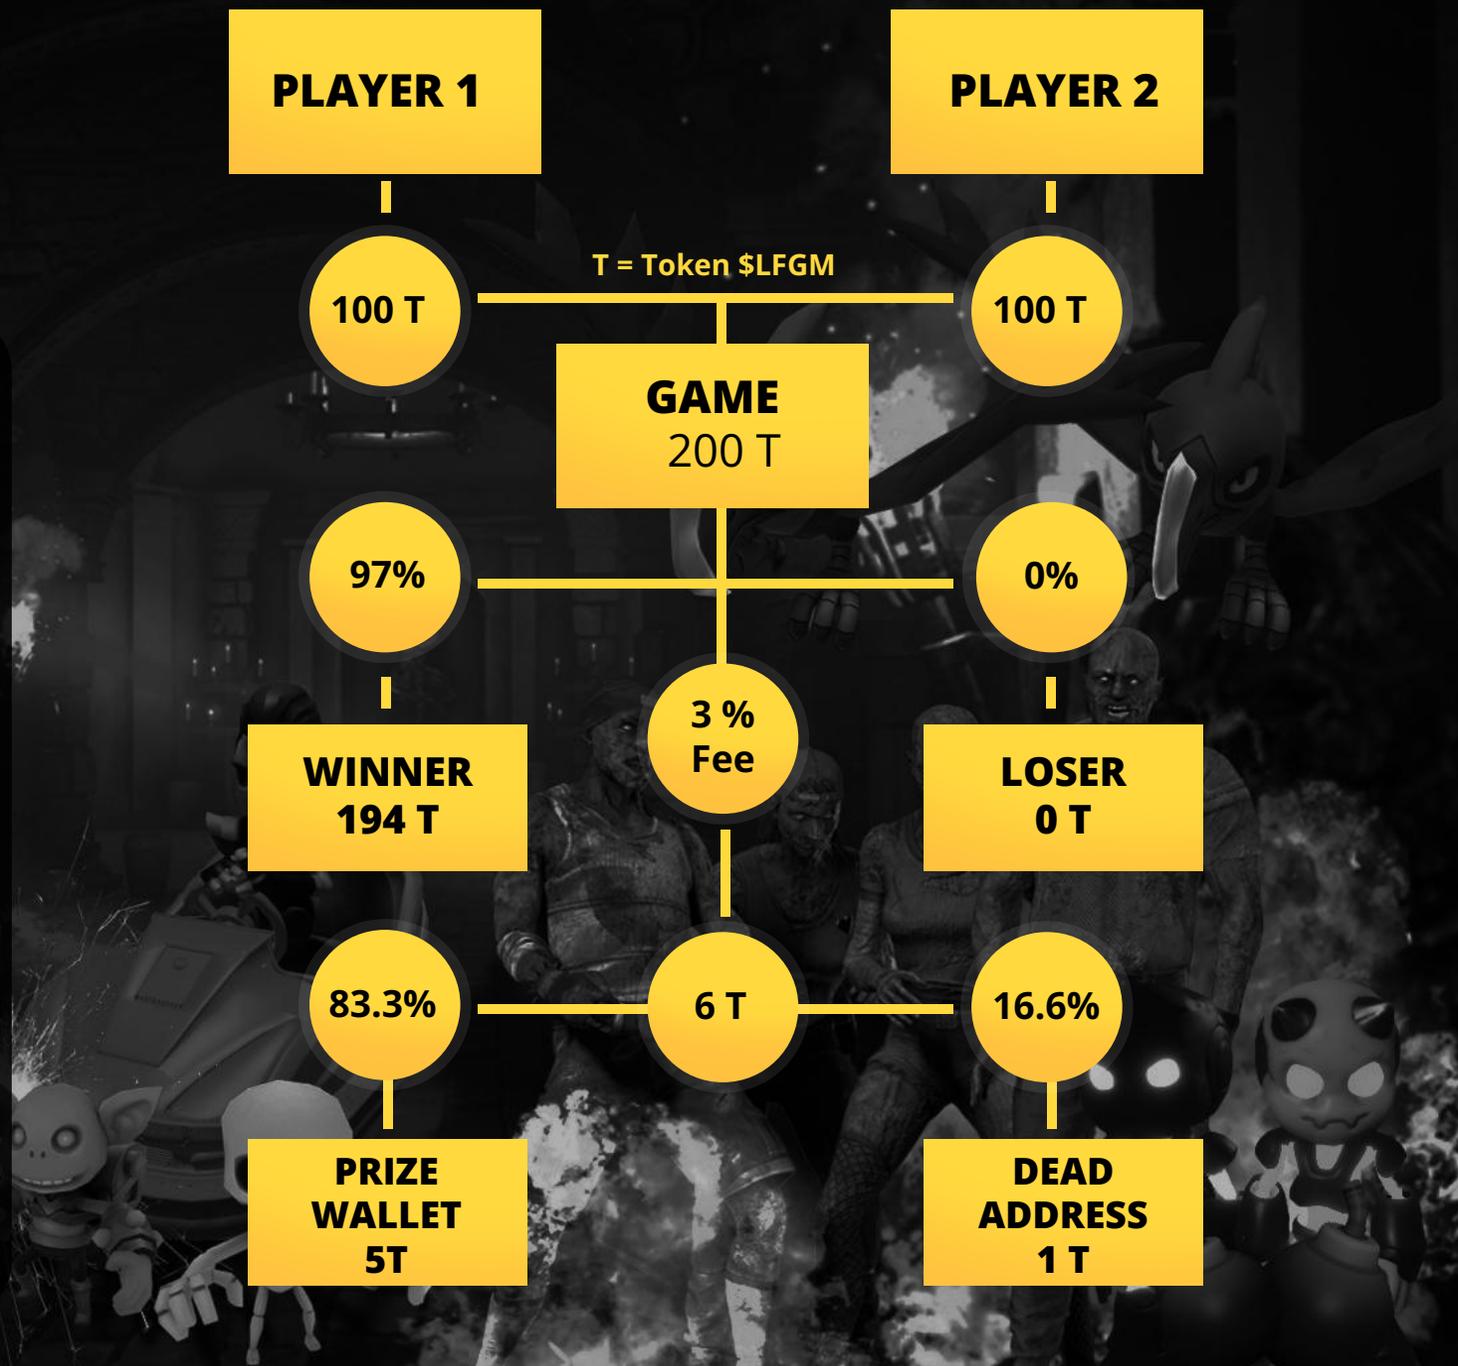

GAME FEE

Players will pay a commission of between 0.5% and 3% of the total of their bet per game depending on different factors, such as holding an NFT from a specific collection, having a referral, etc.

The distribution of the commission is intended for:

1. Burning tokens, making them permanently out of circulation, reducing their supply, and increasing the value of the token.
2. Distribute prizes among the best players in the leagues, for records, tournaments, etc.

The diagram shows an example with the maximum commission (3%) that would be charged to players.

VIDEO GAMES DEVELOPMENT

At Life Games we only develop games that involve skill and not luck or chance. The winner of the game will always be the one who demonstrates the most skill.

Our games are developed in 3D using one of the most powerful game engines on the market: Unreal Engine. Fortnite, PUBG, Valorant, ARK are some of the titles that use this game engine.

In the creation process, we optimize video games seeking a balance between visual quality and performance. The goal is to allow players to enjoy a good experience from any device without sacrificing graphic quality.

Another important component in the games is the security of the games. In addition to having implemented the anti-hacks provided by Unreal Engine in each game, we have created custom security protocols in the code of each of the games to prevent cheats and hacks from being used in them.

Invasion Z

*Shooter - Third person
Bird's eye view*

The zombie apocalypse has broken out and you find yourself alone in your old neighborhood. Survive the waves and use different weapons to kill as many zombies as possible and get the best score.

Challenge of Creatures

Platforms

Choose your monster and go through a platform path full of traps. Get to finish the course alive in the shortest possible time.

Eternal Guardian

Castle Defense

As the Pyramid Guardian, you have to protect the sarcophagus from attack by looters, using your weapons, magic, traps, curses and minions.

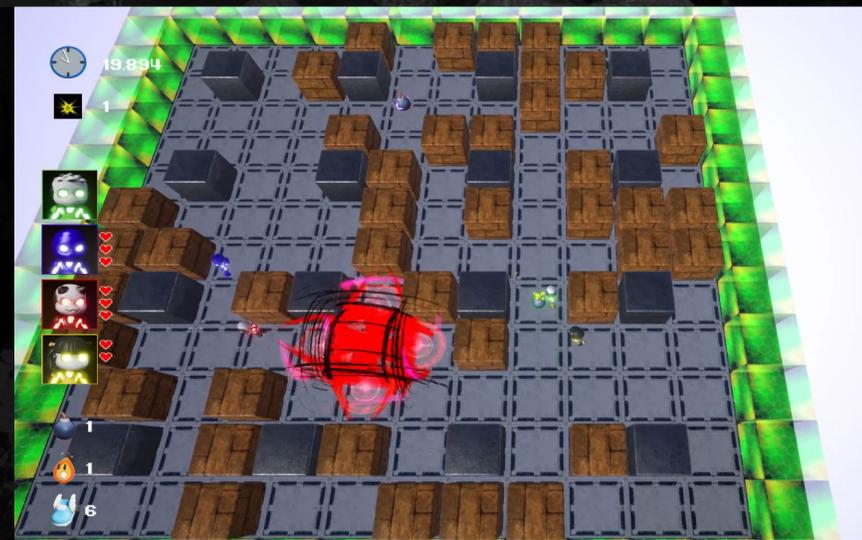

Bombs & Robots

Action - Third person

Bird's eye view

Make your way destroying the blocks and eliminate your three opponents by making them explode with your bombs.

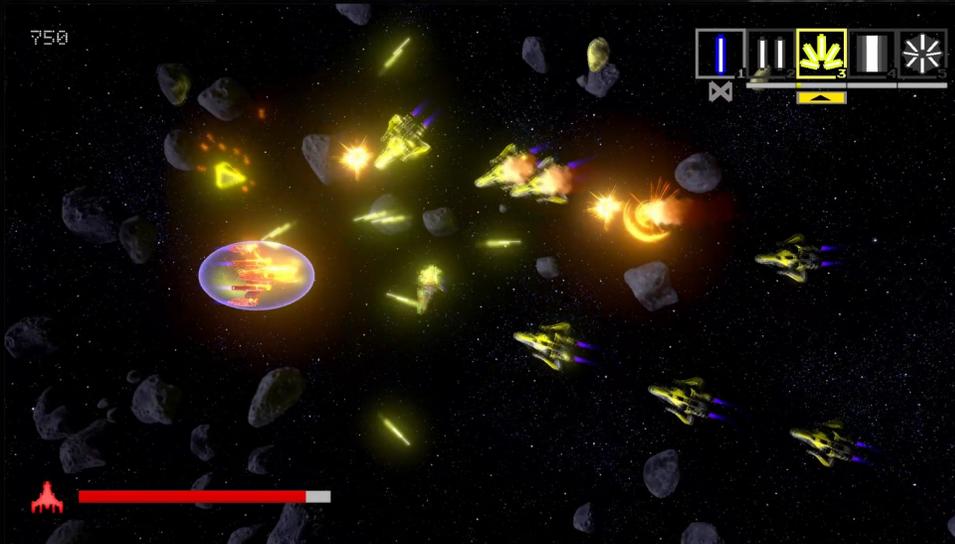

Collision Zone

Action, driving and combat

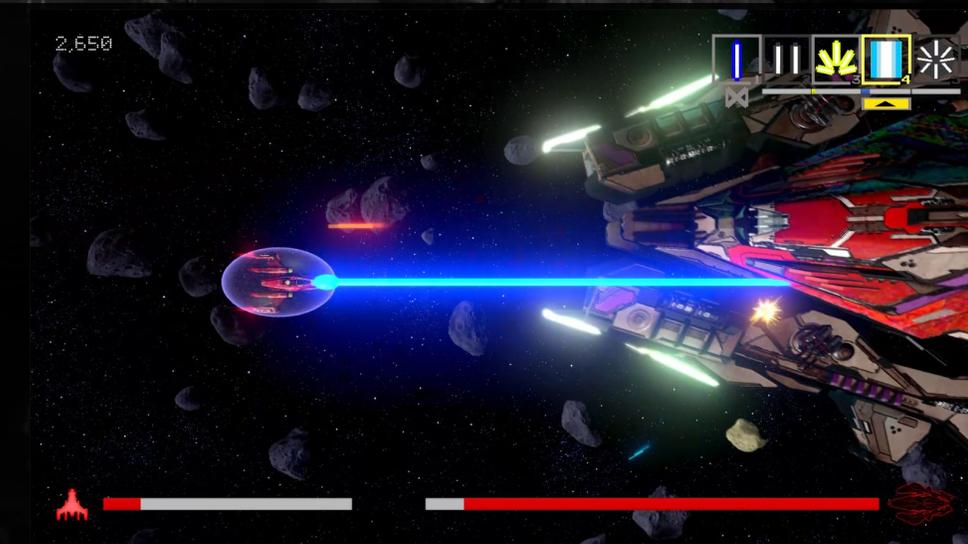

Drive a somewhat special bumper car and face the opponents on the track. Jump, use the turbo, shoot projectiles and crash into everyone to get the highest score.

Omega

Shoot 'em up, Spaceships

Pilot a ship and choose the best weapons to get the highest score by destroying the enemy ships before being eliminated.
